

## Assignment 4

## 1. Minimax function

To make the minimax function, I just follow the pseudo-code from the textbook. I just add a parameter to the max\_value and min\_value function, it is the current depth, so we know at each step the current depth and when to stop.

Question q2: 5/5
-----
Total: 5/5
```

I pass all the test but strangely Pacman keep died at the end of every test I run. But I have got 5 points for the second question, so I assume that is normal. The code is simple, it is almost the same thing as the pseudo-code. We call recursively the max\_value and min\_value functions until we reach the best solution for a game state.

## 2. Alpha Beta function

Same things for this part, I just follow the pseudo-code from the textbook. And I adapt the test for the v, alpha and beta, in the pseudo-code it is with an egal, but we must remove the egal to pass the test. Again, the code is pretty simple, and I got the 5 points on the question. But again, Pacman keep dying at each try.
